AYOBAMI OYESIKU

Frontend Engineer

Lagos, Nigeria | klausxy117@gmail.com | LinkedIn | Github | Portfolio Website

SUMMARY

Frontend Engineer with **5+ years of experience** building **production-grade web applications** for high-traffic, security-critical financial environments. Currently at **Fuspay**, building the **Finswich fintech operator dashboard** and the **FoodPally merchant dashboards**, covering KYC onboarding, wallets, service pricing and live analytics. Previously led the frontend of a **live payments platform (Daman)** handling real-time transactions, multi-provider wallet systems, and crypto funding integrations across deposit and withdrawal flows with **5 third-party payment providers** and complex UI states. Independently built a full **LMS platform** from the ground up. Specializes in **React.js, Next.js, and TypeScript**, with a strong track record of translating complex product requirements into scalable, component-driven systems. Actively contributes to **architectural discussions**, collaborating with cross-functional stakeholders to define technical approaches and implementation strategies aligned with product goals. Proven ability to take **ownership** of technical decisions, and ship reliable software in fast-moving, **Agile** teams.

EXPERIENCE

Frontend Engineer · Fuspay

Aug 2026 – Present

Next.js · React.js · TypeScript · Tailwind CSS · Shadcn/UI · REST APIs · CI/CD

Finswich — *White-label fintech operator dashboard*

- Built features across a **multi-app operator dashboard** covering accounts, cards, customers, billing, campaigns, wallets and stores, shipping through a **CI/CD workflow**.
- Implemented **merchant onboarding with KYC**, including shareholder ownership rules and persistence of onboarding documents and licence status across devices.
- Built the **service pricing configuration**: fixed country pricing, percentage-based utility pricing, crypto asset pricing and platform fee breakdowns, all backed by validated forms.
- Delivered **wallet features** including an internal currency swap flow, settlement wallets, shared wallet state across hooks, and live bank and virtual account data.
- Integrated **live app plan checkout** and **live analytics** with proper empty states, alongside campaign filtering and a customer location map.

FoodPally — *Franchise, Kitchen and Special Kitchen dashboards*

- Delivered **three FoodPally dashboard variants in about six weeks** by adapting a shared architecture and component foundation, which allowed each variant to ship at speed.
- Built the **Kitchen and Special Kitchen merchant dashboards** with OTP authentication, tiered KYC gating, payment-required store activation, a product catalogue with variants and shipping, order management, and products aggregated across multiple kitchens.
- Built **NGN wallets** with PIN protection, KYC-gated withdrawals, and funding through **Fuspay's embedded checkout**, plus Special Kitchen delivery settings and enforced kitchen and product limits.
- Built the **Franchise dashboard** with per-area FoodPally unlocks, coupon redemption with phone validation, a customer location map, and serialized token refresh to prevent session revocations.

Key skills: Next.js, React.js, TypeScript, Tailwind CSS, Shadcn/UI, Framer Motion, Recharts, Zod, REST APIs, CI/CD, Git

Lead Frontend Engineer · Charbens Limited Oct 2025 – July 2026

React.js · TypeScript · Context API · REST APIs · CI/CD

Daman — *High-traffic Financial Transactions Platform*

- Led the frontend engineering of a high-traffic financial platform, overseeing **architecture decisions and code quality** across a team of frontend engineers in a **high-traffic, security-sensitive** production environment.
- Built and owned end-to-end implementation of **secure customer-facing authentication workflows** (Sign Up, Login, Forgot Password, Reset Password), incorporating robust form validation, error handling, and XSS mitigation through safe rendering patterns and input sanitization.
- Architected a **dynamic dashboard** with multiple real-time, data-driven game sections, managing **complex UI state via Context API** to support live transactional updates and concurrent user interactions.
- Engineered an **interactive Invite Wheel game mechanic** with smooth animations, real-time reward updates, and gifting logic, driving measurable improvements in user engagement and session retention.
- Delivered **Promotions and Referral systems** in close collaboration with backend engineers, ensuring accurate reward logic, reliable RESTful API integration, and consistent user experience across flows.
- Engineered a full **wallet system** covering both **deposit and withdrawal flows**, integrating 5 third-party payment providers including UPI, e-wallet channels, and OSPay, alongside **USDT-TRC20 crypto funding** support built in collaboration with backend engineers, handling dynamic provider availability, balance ranges, and transaction state management.
- Cut initial page load time by **~30%** through lazy loading strategies and optimized rendering patterns, directly improving performance in a high-traffic production environment.
- Shipped **i18n support** enabling multi-language access for an international user base, improving accessibility and expanding platform reach.
- Wrote **unit and integration tests** using Jest and React Testing Library, increasing code reliability and reducing regression risk across critical user flows.

Key skills: React.js • TypeScript, Context API, Framer Motion, i18n, REST APIs, Payment Gateway Integration, Jest, React Testing Library, WebSockets, CI/CD, Git, Figma

Frontend Engineer · Raotech Jul 2023 – Jul 2025

Next.js · TypeScript · React Query · REST APIs

Learnerkia — *Multi-role Learning Management System for individuals and organizations*

- Defined and implemented the **entire frontend architecture from the ground up**, establishing the Next.js App Router folder structure, component hierarchy, state management strategy, and API integration patterns across a cross-functional team.
- Designed and built **three significantly distinct authentication and onboarding flows** for Individual users, Organization admins, and Super Admins, each with unique registration logic, permission scopes, and role-specific entry points.
- Implemented **multi-tier role-based access control** enforcing strict permission boundaries across all three user types, ensuring each role accessed only its designated platform surface.
- Built a highly reusable, **modular data table component** with server-side pagination, advanced filtering via a dedicated FilterModal, and toggleable sub-components, enabling flexible reuse across multiple admin and super-admin views.
- Managed all server state and data fetching using **TanStack Query (React Query)**, ensuring efficient caching, background re-fetching, and consistent data synchronization across user sessions.
- Developed a **shared component library** that standardized UI patterns across the platform, reducing redundant code and accelerating feature delivery across the team.
- Implemented **SSR patterns** and semantic HTML best practices with Next.js, improving initial load performance and establishing an SEO foundation for a content-heavy platform.
- Collaborated closely with backend engineers on **RESTful API integration** and with designers to translate wireframes into polished, production-ready interfaces.

Key skills: Next.js, TypeScript, React.js, TanStack Query, Context API, REST APIs, Tailwind CSS, Figma, Git

Frontend Developer · Grow

Aug 2021 – Apr 2023

React.js · JavaScript · REST APIs

Grow Farm School — *AgriTech e-learning platform for agricultural education*

- Independently built the **entire frontend from scratch** using React.js, owning all architecture decisions, component structure, and feature implementation without supervision.
- Designed **authentication and onboarding flows** and built core learning features including **course listing, course content pages, video playback, and quizzes**, delivering a complete end-to-end learning experience.
- Integrated a **payment gateway** enabling users to purchase course subscriptions, handling transaction flows and payment state management on the frontend.
- Developed **reusable UI components** (Cards, Dropdowns, Forms, Profile, Navigation) establishing a consistent design system, and collaborated with backend developers to integrate APIs for **course management, user authentication, progress tracking, and community features**.

Key skills: React.js, JavaScript, REST APIs, Payment Gateway Integration, Git

SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS
Frameworks & Libraries	React.js, Next.js, TanStack Query, Tailwind CSS, Framer Motion, Shadcn/UI
State Management	Context API, Redux, Zustand, TanStack Query
Testing	Jest, React Testing Library
Performance	Lazy Loading, SSR, Code Splitting, WCAG Accessibility, Frontend Performance Optimisation
Dev Tools & Practices	Git, Vite, REST APIs, GraphQL, WebSockets, CI/CD Pipelines, Agile/Scrum, Sentry
AI Workflows	Claude Code, OpenAI Codex, AI-assisted development with human code review and testing
Design Tools	Figma

EDUCATION

University of Lagos • B.Sc. Mechanical Engineering

2017 – 2024

Lagos, Nigeria

CERTIFICATIONS

Introduction to Front-End Development • Meta (Coursera) 2020

Blockchain Basics • Cyfrin Updraft 2024
